Location: Hamilton, New Zealand

Visa Status: Resident

Professional Summary

Recent Computer Science graduate with 3 years of experience in software engineering. Strong foundation in software quality assurance, technical support, SQL, and web application development. Adept in Agile methodologies, QA practices, and customer-focused software support. Eager to contribute to innovative environmental solutions and expand into software development roles.

Key Skills

Programming Languages: Python, Java, JavaScript, SQL, C++

Web Technologies: HTML, CSS, React, Angular, Node.js

Database: MySQL, SQL Querying, Data Validation

Testing & QA: Manual Testing, Unit Testing (JUnit), Selenium

Tools: Jira, Git, GitHub, GitLab, UNIX Command Line

Concepts: RESTful APIs, Agile/Scrum, Bug Tracking, Web Applications

Soft Skills: Communication, Documentation, Problem-Solving, Customer Support

Education

Bachelor of Information Technology, JNT University, India – 2020

Professional Experience

Software Engineer – Capgemini Pvt Ltd

October 2020 – September 2023

- Designed, developed, and maintained scalable software applications **using Python and Java, enhancing overall system efficiency by 20%. Collaborated with cross-functional teams to translate business requirements into robust technical solutions.**
- Provided technical support and troubleshooting assistance **to end users, resolving software bugs and system errors efficiently. Acted as a key point of contact for issue diagnosis, replication, and resolution, improving user satisfaction and reducing downtime.**
- Performed comprehensive software testing and QA**, including unit testing (JUnit), regression testing, and automated testing with Selenium. Participated in bug triage meetings and contributed to quality assurance planning, ensuring bug-free releases.**
- **Crafted and optimized SQL queries** for backend data testing, validation, and performance tuning. Developed automation scripts for database backup, recovery, and data integrity checks to support disaster recovery planning.
- **Built and maintained full-stack web applications** using React.js for front-end development and Node.js for backend services. Implemented responsive UI components and RESTful APIs, delivering intuitive user experiences.
- **Utilized Jira** for project management, sprint planning, and ticket tracking in Agile development cycles. Participated in daily stand-ups, sprint reviews, and retrospectives to continuously improve delivery processes and team collaboration.

Personal Projects

CropBidding – Agricultural Bidding Platform

- Built with JavaScript, Spring Boot, MySQL
- Enabled farmers to auction crops to highest bidders
- Designed REST APIs and ensured responsive design

Simon Game – Web-Based Memory Game

- Developed with HTML, CSS, JavaScript
- Focused on user interaction, DOM manipulation, and game logic

Achievements

- Received client and leadership commendations for outstanding support
- Recognized as Rising Star at Capgemini
